## › SMOKE GENERATOR

The smoke generator by slow combustion of our production has been designed to be used not only in hot-smoked processes but also in cold-ageing processes.

 ENTIRELY BUILT IN  
AISI 304 STAINLESS STEEL

### › CHARACTERISTICS OF CONSTRUCTION

It has an important filling capacity. It can produce large and small quantities of smoke by using wood shavings and sawdust.

**Hopper volume:** 170 litres = 1 sawdust bag

**Electrical connection:** 2.0kw, 230/400v, 415/440v, 50/60hz

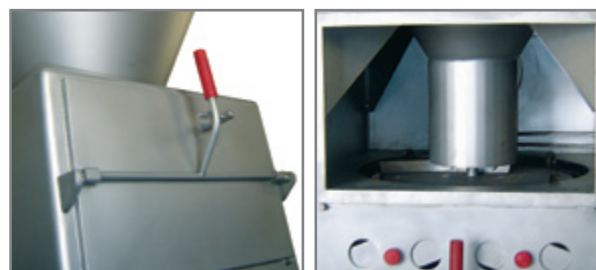

(Special voltage according to request)

### › OPERATION

It has an autonomous operation system. This machine can be operated with programmable software (manual), controlled by a cooking oven for hot-smoked processes and for cold-smoked processes (automatic).

The controlled combustion is carried out through an electric resistance that receives the orders from the processor.

The density of the generated smoke is uniform from the beginning up to the end of the process guaranteeing a good result.

### › MAINTENANCE

Its simple design makes that the cleaning tasks be minimum. The ash and combustion residues are minimum and are collected in the lower compartment assigned to that purpose.
